Iminium Salt Catalysts for Asymmetric Epoxidation: The First High Enantioselectivities.

Page 1545. Table 3 should appear as shown below.

Table 3. Asymmetric Epoxidation of Various Alkenes Mediated by Catalyst **7a**[a]

alkene	time/h	yield/ %[b]	ee/ %[c]	config[d]
	0.45	58	20	(–)-*S*,*S*
	0.25	63	25	(–)-1*S*,2*S*
	0.30	60	17	(+)-1*R*,2*S*
	0.35	66	95	(+)-1*R*,2*S*
	2.0	67	38	(–)-2*S*,3*S*
	1.0	70	29	(+)-*S*

[a] Conditions: iminium salt (5 mol %), Oxone (2 equiv), Na_2CO_3 (4 equiv), MeCN/H_2O (1:1), 0 °C. [b] Isolated yields. [c] Enantiomeric excesses were determined by ^1H NMR spectroscopy in the presence of (+)-Eu(hfc)$_3$ or by chiral HPLC using a Chiracel OD column.[1] [d] The absolute configurations of the major enantiomers were determined by comparison of optical rotation with those reported in the literature.

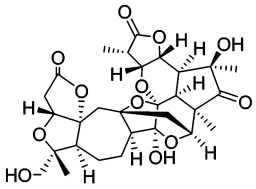
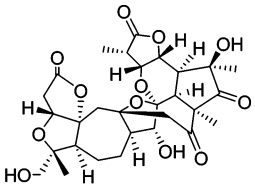
Sphenadilactones A and B, Two Novel Nortriterpenoids from *Schisandra sphenanthera*.

Page 1475. In the structures of sphenadilactones A and B, we mistook the α-orientation of Me-27 to be the *β*-orientation. The correct structures are shown below.



Sphenadilactone A



Sphenadilactone B
