Correction to "Structure and Properties of Mixed Strontium–Manganese Metaphosphate Glasses"

Ioannis Konidakis, Christos-Platon E. Varsamis,* Efstratios I. Kamitsos, Doris Möncke, and Doris Ehrt

J. Phys. Chem. C **2010**, *114*, 9125–9138. 10.1021/jp101750t

Unfortunately a typo in Lambert–Beer's Law, $A(\lambda) = \varepsilon(\lambda)ct$, renders the equation useless.

A slash is missing from the equation, which can be found on page 3 at the beginning of the second paragraph, which should read:

The intensity of the 530 nm band can be used to estimate the Mn^{3+} content in glass according to the Lambert–Beer law, $A(\lambda)/t = \varepsilon(\lambda)c$, where $A(\lambda)$ and $\varepsilon(\lambda)$ denote the absorbance and molar extinction coefficient at wavelength λ, respectively; t is the thickness of the glass plate; and c is the concentration of Mn^{3+} ions.
