Nickel-Catalyzed Homoallylation Reaction of Aldehydes with 1,3-Dienes: Stereochemical and Mechanistic Studies.

Page 2716, Table 1, entry 5, and page 2717, Table 2. We reported that a bishomoallylic alcohol was obtained while using 1,3-cyclohexadiene. However, we learned that the structures of compounds **9** and **12** were incorrectly assigned. Compounds **9** and **12a–e** should be homoallylic alcohols. In this reaction, cyclohexadiene shows different reactivity than other dienes, and *allylation* takes place selectively.<sup>1</sup> We thank Professor Yoshinao Tamaru for calling our attention to this error.
