

## Additions and Corrections

Volume 10, 2008

Jing Li and Todd L. Lowary\*

Synthesis of Bicyclo[3.1.0]hexane Derivatives as Conformationally Restricted Analogues of  $\beta$ -Arabinofuranosyl and  $\alpha$ -Galactofuranosyl Rings.

Page 884, ref 21. The authors failed to cite previous work by Bennet and co-workers, which has demonstrated that amino derivatives of bicyclo[4.1.0]heptanes are potent glycosidase inhibitors: (a) Tanaka, K. S. E.; Winters, G. C.; Batchelor, R. J.; Einstein, F. W. B.; Bennet, A. J. *J. Am. Chem. Soc.* **2001**, *123*, 998. (b) Wang, Y.; Bennet, A. J. *Org. Biomol. Chem.* **2007**, 1731. We apologize for this oversight.
