Leo A. Paquette,* Gregory D. Parker, Takahiro Tei, and Shuzhi Dong. Pestalotiopsin A. Enantioselective Construction of Potential Building Blocks Derived from Antipodal Cyclobutanol Intermediates.

Page 7127. The configurations at C-3 in **13** and its counterpart **14** were inadvertently reversed. As delineated previously (ref 8), the major aldol product **13** (9:1) has the anti configuration, while the minor component **14** is the syn diastereomer. The correct graphic is shown below. All subsequent transformation products should reflect this minor adjustment.

Robert J. Carroll, Hannes Leisch, Lena Rochon, Tomas Hudlicky,* and D. Phillip Cox. One-Pot Conversion of Thebaine to Hydrocodone and Synthesis of Neopinone Ketal.

Page 747. We would like to correct following mistake. The first sentence in the second paragraph on page 747 originally reads:

“Thebaine, usually a minor constituent of opium latex, is isolated as a major component from *genetically engineered hybrids* introduced by the company Tasmanian Alkaloids.⁵”

The sentence should read:

“Thebaine, usually a minor constituent of opium and poppy straw, is isolated as a major component from *mutant poppy plants* introduced by the company Tasmanian Alkaloids.⁵”
