**S. J. Reitmeier, R. R. Mukti, A. Jentys,\* and J. A. Lercher:** Surface Transport Processes and Sticking Probability of Aromatic Molecules in HZSM-5

Pages 2538–2544. In the Results of the manuscript “Surface transport processes and sticking probability of aromatic molecules in HZSM-5” on page 2541 in Table 2, the values for *p*-xylene on Aerosil (line 8 of Table 2) should be “0.99; 1.07; 1.03 and 0.98”.

The slight differences to the previously published numbers in ref 1 result from a change in the integration ranges of the IR bands used for the determination of the surface coverage.
