Subhash C. Annedi, Weiyong Li, Sheeba Samson, and Lakshmi P. Kotra*. Design and Synthesis of Novel Fluoropeptidomimetics as Potential Mimics of the Transition State during Peptide Hydrolysis.

Pages 1047, 1048, and 1049. Interpretation for the ^1H and ^{13}C NMR resonance signals coupling to the fluorine atom and the NMR resonance signals for the fluorine atom in compounds **23**, **26**, **3**, **28**, **29**, **4–6**, **36–39**, **7**, **8**, **42**, **9**, and **43** were misinterpreted due to the diastereomeric mixtures in these compounds (in the Experimental Section). NMR spectra originally submitted in the Supporting Information, however, do reflect the corrected data presented here.

Supporting Information Available: A table showing the correct interpretation for the multiplicities. This material is available free of charge via the Internet at <http://pubs.acs.org>.
