P. Tarakeswar, Su-Moon Park, and Kwang S. Kim*

An Electrochemically Controllable Nanomechanical Molecular System Utilizing Edge-to-Face and Face-to-Face Aromatic Interactions.

Pages 3971–3974. The graphics appearing in the abstract, Figure 1, and Figure 4 give the incorrect impression that in the left-hand side of each graphic, one $-\text{CH}_2-$ group in the $-\text{C}-\text{C}-\text{S}-$ linker (i.e., between the left-hand-side sulfur atom and the top benzene ring) seems to be missing because the $-\text{C}-\text{C}-\text{S}-$ linker is projected as a long $-\text{C}-\text{S}-$ linker along an almost straight line. To dispel such confusion, the abstract graphic should be replaced by the following graphic and Figures 1 and 4 should be replaced by the new figures.
