On the Endo/Exo Stereoselectivity of Intramolecular Diels–Alder Reactions of Hexadienylacrylates: An Interesting Failure of Density Functional Theory.

Page 3790. In Table 1, entry 5, the correct experimental endo:exo ratio should be 27:73 and not 73:27, as reported. This experimental error led to incorrect conclusions being drawn from our study, i.e., that DFT is inferior to MP theory and that DFT failed in this case. A full paper containing a complete study of this system will be submitted shortly.
