Oleg Kornilov, Chia C. Wang, Oliver Bünermann, Andrew T. Healy, Mathew Leonard, Chunte Peng, Stephen R. Leone, Daniel M. Neumark, and Oliver Gessner\*: Ultrafast Dynamics in Helium Nanodroplets Probed by Femtosecond Time-Resolved EUV Photoelectron Imaging

Page 1437. Figure 5 in this article has to be replaced since the x-axis in Figure 5c of the original is scaled differently than in Figure 5a,b.

**Figure 5.** Transient intensities in the  $np^{-1}$  ( $n = 4, 5$ ) photoelectron peak regions: (a) parallel emission; (b) sideways emission; (c) difference between (a) and (b) normalized to equal emission angle ranges. Solid curves are fits to model functions composed of a fast decaying component, a slowly decaying component and a step function, convoluted with the apparatus function. Components are shown as dashed curves.
