Scott Gronert. An Alternative Interpretation of the C-H Bond Strengths of Alkanes.

Page 1212. In eq 3, $f(\text{C,H})$ should be preceded by a plus sign rather than a minus sign. The data in the paper was analyzed using the correct version of the equation, and this typographical error has no impact on the results or conclusions. The correct equation is given below

$$\Delta H_f = n_{\text{C-C}}E_{\text{C-C}} + n_{\text{C-H}}E_{\text{C-H}} + n_{\text{C-C-C}}E_{\text{C-C-C}} + n_{\text{C-C-H}}E_{\text{C-C-H}} + n_{\text{H-C-H}}E_{\text{H-C-H}} + f(\text{C,H}) \quad (3)$$

where $f(\text{C,H}) = (170.6 + E_{\text{C}})n_{\text{C}} + 52.1n_{\text{H}}$.

The author thanks Dr. T. Andrew Mobley and his student, Eleanor G. Tennyson, at Grinnell College for bringing the error to his attention.
