

Additions and Corrections

Vol. 3, 2001

Amos B. Smith, III* and Michael Frohn

Lituarine Synthetic Studies. An Efficient, Stereocontrolled Construction of the Common C(7–19) Tricyclic Spiroketal Fragment.

Page 3982, Figure 1. Two structures were numbered incorrectly; the correct numbers are shown below.

Page 3980, reference 9. The predicted equilibrium ratio of the C(16) epimers of **4** should read 5.3:1. These calculations do not support the speculation that the experimentally derived ratio of 1.4:1 is at equilibrium (page 3982).

Dong-Hyun Ko, Kyoung Hoon Kim, and Deok-Chan Ha*

Enantioselective Additions of Diethylzinc and Diphenylzinc to Aldehydes Using 2-Dialkylaminomethyl-2'-hydroxy-1,1'-binaphthyls.

Page 3761, Table 4. The numbering of ligands is presented incorrectly. The ligands in entries 3, 4, 6, and 7 in Table 4 should be **3d**, **3e**, **3f**, and **3d**, respectively.

Ligand **3f** in footnote c of Table 4 should be **3d**.

Table 4. Addition of Diphenylzinc to *p*-Anisaldehyde Using Ligands **3a–f**

entry	ligand	<i>t</i> (h)	isolated yield (%)	ee (%) ^{a,b}
1	3a	1	71	88
2	3b	1	93	87
3	3d	1	97	95
4	3e	1	95	94
5 ^c	3d	10	94	90
6	3f	1	97	98
7 ^d	3d	24	75	98

^a Determined by HPLC (Chiralcel OJ column). ^b Absolute configuration assigned by comparison to the literature. ^c Using 5 mol % catalyst **3d**. ^d A mixture of Ph₂Zn (1 equiv) and Et₂Zn (2 equiv) was used.
